

ABDUL SMEED AHMAD

Software Engineer & Flutter / Full-Stack Developer

Location: Rawalpindi, Pakistan **Phone:** +92-341-4630055 **Email:** ahmedsmeed3@gmail.com
LinkedIn: [linkedin.com/in/abdulsmeed](https://www.linkedin.com/in/abdulsmeed)

PROFESSIONAL SUMMARY

Results-driven Software Engineer with proven experience designing and delivering scalable cross-platform mobile and full-stack web applications using Flutter, Dart, Next.js, and Clean Architecture principles. Strong background spanning multi-tenant SaaS platforms, custom fitness and business CRMs, and applied AI/ML applications integrated with Python Flask, Firebase, Supabase, and MySQL. Advanced practitioner of modern AI development platforms (including Antigravity AI, LLM prompt engineering, and automated code refactoring) to optimize system architecture, generate robust APIs, and accelerate end-to-end software delivery.

TECHNICAL SKILLS

Core & Frameworks:	Flutter, Dart, Next.js, React, Python, C, C++, Java, Clean Architecture, MVVM, Widget Lifecycle
State Management:	Bloc, Provider, Riverpod, GetX
Backend & Cloud:	Supabase, Firebase (Auth, Firestore, Realtime DB, Cloud Storage), MySQL, PostgreSQL, SQLite, Flask
APIs & Integrations:	RESTful API Design & Integration, Stripe Gateway, Google Maps Platform, Geolocation Services
AI Tools & Applied ML:	Antigravity AI, LLM Prompt Engineering, Computer Vision / Sign Language ML (ASL & BSL Models)
Tools & Practices:	Git, Postman, Agile/Scrum Methodologies, CI/CD Pipelines, Performance Profiling
Languages:	English (Professional Working Proficiency), Urdu (Native)

WORK EXPERIENCE

Flutter Developer Techozon Software House • Rawalpindi, Pakistan	Jul 2023 – Present
- Architected and deployed production-ready mobile and web applications using Flutter, strictly adhering to Clean Architecture and reusable widget paradigms. - Implemented full-lifecycle Firebase services (Authentication, Firestore, Realtime Database, Cloud Storage) supporting low-latency data synchronization for operational workflows. - Integrated Stripe SDK for end-to-end multi-currency payment processing, booking confirmations, and payout tracking. - Embedded Google Maps API and location-based services for live fleet dispatching, dynamic routing, and geofencing. - Leveraged Antigravity AI alongside structured prompt engineering workflows to rapidly generate boilerplate code, test complex API payloads, and expedite bug resolution. - Optimized app rendering performance, frame rates, and state rebuilds, significantly reducing memory consumption and improving API response caching across production apps.	

KEY PROJECTS

ATV & Buggy Rental Ecosystem (Consumer App, Supervisor App & CRM)

Flutter, Dart, Firebase, Stripe, Google Maps

Production Fleet & Rental Management Suite

- **Consumer Mobile App:** Built end-to-end rental booking flows, vehicle slot reservations, dynamic digital waivers, and secure checkout via integrated **Stripe Payment Gateway**. [\[Play Store Link\]](#)
- **Supervisor App (Private Enterprise):** Developed an administrative monitoring tool enabling real-time fleet oversight, supervisor-to-vehicle assignment, and live operational dispatch.
- **Business CRM (Private Enterprise):** Engineered an internal operations platform featuring sales lead tracking, automated appointment scheduling, and performance analytics dashboards.

Rikskampen X – Fitness Platform & CRM Remodeling

Next.js, MySQL, REST APIs, Antigravity AI | In Progress

Next-Gen Fitness Challenge & Member Operations CRM

- Leading the complete architectural rewrite of an existing legacy fitness CRM from scratch using **Next.js** and **MySQL**.
- Designing relational schemas and high-performance RESTful APIs to track participant fitness milestones, competition pipelines, coaching schedules, and member data.
- Leveraging **Antigravity AI** to accelerate full-stack component scaffolding, optimize complex SQL joins, and automate test data generation.
- Building dynamic member dashboards and administrative management consoles for real-time engagement and progress reporting.

Hybrid SaaS & POS Inventory and Booking Management System

Next.js, Supabase, PostgreSQL, Client APIs, Antigravity AI

Multi-Tenant Cloud Platform & Point of Sale System

- Architected a multi-tenant cloud SaaS platform with **Next.js** and **Supabase**, unified with an offline-ready POS frontend for retail stock control and time-slot scheduling.
- Designed and exposed high-throughput **Client RESTful APIs** allowing external client systems to manage, query, and synchronize inventory data programmatically.
- Implemented dual inventory logic supporting unit-count retail goods alongside capacity-dynamic appointment slots.
- Utilized AI development workflows for rapid database schema modeling, API contract testing, and edge-case simulation.

Jtime – Workplace Management & Productivity App

Flutter, Dart, REST APIs, SQLite

Workforce Productivity & Time Tracking Application

- Developed an automated work-hour tracking, milestone logging, and project task management interface with local-first SQLite persistence.
- Engineered responsive, cross-platform layouts delivering consistent rendering across diverse mobile and tablet viewports.

EDUCATION & ACADEMIC PROJECTS

Bachelor of Science in Computer Science (BSCS)

2019 – 2023

PMAS-Arid Agriculture University • Rawalpindi, Pakistan

- **Final Year Project (FYP):** *Sign Language Translation & Communication App for Deaf & Mute Individuals* (Team of 4).
 - Trained & fine-tuned Computer Vision ML models for real-time recognition of American Sign Language (ASL) and British Sign Language (BSL).
 - Built Python Flask REST APIs to serve low-latency inference endpoints and integrated model predictions directly into a responsive Flutter mobile client.
- **Core Coursework:** Data Structures & Algorithms, Object-Oriented Programming (C++, Java), Database Management Systems, Software Engineering Principles, Computer Networks.
